

DEVELOPER GUIDE (डेवलपर गाइड)

Note for Developers: This section contains database relationships, Laravel model architectures, FEFO logic scopes, and SQL security guidelines.

1. Database Schema & Architecture (डेटाबेस संरचना)

Table Mapping:

pharmacy_suppliers:

Stores supplier/vendor details (party_type = 2, 3, 4).

Stores supplier/customer details (party_type = 1, 2, 3).

Stores only supplier/vendor details (party_type = 2, 4).

pharmacy_categories:

Master category table (e.g. Tablets, Syrups).

pharmacy_medicines:

Master drugs list mapped with customer_id, supplier_id, and category_id.

pharmacy_medicine_batches:

Tracks stock quantities, batch details, pricing, and expiry dates.

2. Multi-Tenant Security & Rules (मल्टी-टेनेंट सुरक्षा)

A> Tenant Isolation:

Every database operation **MUST** strictly filter by customer_id.

// Always apply customer context

where('customer_id', authUser()->customer_id)

B> Column Ambiguity Protection:

When using Joins, always prefix column names with table aliases (e.g., pharmacy_medicines.customer_id).

3. Laravel Eloquent Models (लारावेल मॉडल्स)

A>  PharmacyMedicine.php

B>  PharmacyMedicineBatch.php

C> Optimized API / Controller Endpoint (कंट्रोलर लॉजिक)
